DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a level sensing device/method, classified in class 73, subclass 304R.
- II. Claims 12-20, drawn to a method for synthesizing an array of biopolymers with a dispensing system, classified in class 73, subclass 863.32.

The inventions are distinct, each from the other because of the following reasons:

Inventions II (method claims) and I (apparatus claims) are related as method and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process such as determining the liquid/fluid level from the measured effect of the fluid.

Inventions I (method claim 7) and II are related as subcombination and combination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all the

Art Unit: 2856

limitation of I are not in II. The subcombination has separate utility such as determining the liquid/fluid level from the measured effect of the fluid.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
